Title: IMPROVED STRUCTURE OF GYPSUM BOARD

Abstract:

The invention is related to an improved structure of gypsum board, especially a structure of gypsum board set on steel furring of ceilings. The gypsum board is mainly consisted of a paper layer with patterns, an aluminum foil layer and a substrate. The substrate basically has a hardened gypsum board. The paper layer has a variety of patterns for option. Users can decorate ceilings to a delighting style by designing a combination of the pattern of the paper layer of the gypsum board. Because of the aluminum foils, the structure of the gypsum board of the invention has not only flame proof but excellent damp proof for avoiding damages of the gypsum board by damp and good heat insulation. The invention provides a more excellent structure of the gypsum board with a long use life for decoration of ceilings.
